```sql
--1. if/else is used to make decisions
--2. product weights can be set, but not to a negative
--3. digital product, a weight of 0 makes sense
--4. physical product should have a weight
--5. set the weight of a product with a particular id

sp_columns 'Product'--6. run this to look at the structure of a table
go
--7. we're storing information on physical products
alter procedure SetWeight
        @ProductID int,
        @Weight decimal
as

    if @Weight>0 --8. checks to ensure input is sensible
        update Production.Product
                set weight=@Weight
        where ProductID=@ProductID
        else --9. runs when user tries calling proc. with a value like -20
        Print 'Weight Must Exceed 0'
go
--10. line below results in 'Weight Must Exceed 0' because of the if
SetWeight @ProductID=4, @Weight=-10
```
